BLACKHAWK'S NEW ANCHOR PUMP® #102 EVFD IS DESIGNED SPECIFICALLY FOR REFINERY CLEANUP AND SPILL REMOVAL

BLACKHAWK ENVIRONMENTAL COMPANY'S NEW ANCHOR PISTON PUMP, ELECTRIC MODEL 102EVFD is successfully recovering undisturbed hydrocarbon product for a refinery that has been operating for over 60 years. This hydrocarbon product can now be re-introduced into the refinery for reprocessing and sale.

After several options for hydrocarbon recovery had been attempted, and trying electric submersible and pneumatic pumps in their 6" diameter recovery wells, the company found the ideal solution by choosing the top driven mechanically powered **ANCHOR ELECTRIC PISTON PUMP #102EVFD** for the following reasons:

- The **ANCHOR PUMP** is basically a miniaturized oil well sucker rod pump. It is designed for controlled pumping making it an ideal choice to recover oil and tar like fluids.
- The **ANCHOR PUMP'S** top head drive with working motor parts outside the well that make it easy to service and maintain.
- The **ANCHOR PUMP** is ideal for hazardous and potentially hazardous environments.
- The **ANCHOR PUMP'S** top head drive motor can be either pneumatically or electrically powered. No electric wires or compressed air, depending on power used, is introduced into the well.
