

Piston Pumping Solutions - Landfill

*Difficult Pumping Applications from
Blackhawk Environmental Company*

Blackhawk Introduces Electric Anchor Pump with Programmable Logic Controller for Landfills

*Programmable Logic Controller makes it easy for operator
to set system pressure and flow rate parameters*

Blackhawk's Electric Pump with PLC

Glen Ellyn, IL - BLACKHAWK ENVIRONMENTAL COMPANY introduces their electrically operated positive piston displacement **Anchor Pump with PLC (Programmable Logic Controller)** for hazardous and non-hazardous landfill areas. The Programmable Logic Controller can be programmed for run time, liquid level, stroke count, system pressure and flow rate parameters.

The **Electric Anchor Pump with PLC** is ideal for a wide variety of hazardous and potentially hazardous landfill pumping applications such as: recovering leachate from vertical or horizontal sumps/wells, methane condensate sump and gas well dewatering, groundwater remediation/recovery and tank/sump dewatering.

The **Electric Anchor Pump with PLC**, a reciprocating action plunger pump, mechanically recovers fluid from the well bottom, independent of the well's liquid level, while maintaining a constant flow recovery rate. The **Electric Anchor Pump with PLC** reaches to the lowest possible level and can be installed in wells as small as 2" in diameter.

The **Electric Anchor Pump with PLC's** electric power and power lines are located outside of the well and do not enter into the well or sump. Zero electric wires are in well or sump. The pump drive mechanism is positioned on top of the wellhead and can be easily viewed during operation.

Electric Anchor Pump with PLC can be installed vertically or horizontally and is manufactured in a range of sizes and designs depending on the degree of application difficulty.

For over ten years, the **Blackhawk Anchor Pump** has been successfully operating in landfills across the United States. **Blackhawk Environmental Co.** has been providing pumping solutions for the industrial, environmental, landfill and groundwater markets. Blackhawk specializes in manufacturing quality pumps and controls for demanding pumping applications.
